

PROFESSIONAL PROPERTY SERVICES

LANDSCAPING

The moment your clients and visitors drive by or walk into your property you only have a split second to make their first impression a good one. We are dedicated to providing the best possible service and greatest value to our clients. We take great pride in our properties appearances and treat every property as if it were our own. We appreciate the input of our clients as far as their needs as building owners, business owners and condominium associations. We truly appreciate the beauty in landscaping and realize the value that it adds to our clients investments.

In conjunction with our construction division we have completed several major Low Impact Development Projects over the last several years. Low impact development has become the trend in construction and Apex Properties is at the fore front of low impact landscaping. We have completed several private and public works projects around storm water mitigation. Through construction of Rain Gardens we have helped our clients reduce the amount of untreated storm water leaving their properties and therefore creating more parking areas and a "Green" project.
